## **What Is Adderall and Why Is It Prescribed?**

Adderall is a prescription medication containing amphetamine salts commonly prescribed to treat:

- Attention Deficit Hyperactivity Disorder (ADHD)
- Narcolepsy
- Focus-related cognitive disorders (as diagnosed by a healthcare provider)

Adderall works by improving attention span, impulse control, and mental clarity. Because it is a **Schedule II controlled medication**, it must be prescribed by a licensed medical professional and dispensed by an authorized pharmacy.

---

## **Why Buy Adderall Online Instead of Local Pharmacies?**

Many patients choose online options for convenience, affordability, and privacy. Online pharmacies streamline the process while maintaining legal and medical standards.

### **Key Advantages**

- Discreet packaging
- Direct home delivery

Online platforms are especially useful for patients who already have an ongoing prescription and want reliable access without repeated in-person visits.
